

# Springfield Union Station

## Project Update - March 2015

### Work Completed and Underway

- Completed the sheet piling for retaining wall stabilization
- Completed the demolition of windows and installation of temporary replacement windows
- Completed the demolition of the interior of the Terminal building
- Completed installation of the temporary wall on the west side of the Terminal building
- Continued peeling paint and plaster removal inside Terminal
- Continued excavation of the parking garage site foundation

3/15 - The old windows have been removed and temporary windows have been installed to protect the interior of the building until new construction can begin.

3/15 - This little "bug" of a demolition machine is hammering away on an old vault used by the railroad.

3/15 - The excavation continues at the site of the future parking garage.

3/15 - The yellow wall is where the temporary protection of the Terminal building for the west wall has been constructed. The selective demolition contractor continues to work inside and removes debris through the wall.

### Upcoming Work

- Award the parking garage construction
- Completion of the excavation of the parking garage foundation
- Installation of parking garage foundation
- Installation of site utility infrastructure
